COMPOUND INDEX

Ag 107
$Ag-Zn/Al_2O_3$ 80
$Ag-Cd/Al_2O_3$ 80
Al-3.85% Cu 221
AlAs 38, 40
$AlAs/Ga_{1-x}Al_xAs$ 40
$Al_{42}Ni_{58}$ 212, 222
Al_2O_3 58, 78-79, 86
γAl_2O_3 86
AlSb/GaSb 48
As 260
Au 258

B 253,258
Ba 107
$BaTiO_3$ 96
Be 218-219, 222
BeO 208

C 126, 256
C (diamond) 260
$Ca_{2-x}Ba_xSiO_4$ 142
CdTe 55-57
(Cd Mn) Te 55-57
Co 258-259
$Co-Mo/\gamma-Al_2O_3$ 83-84
$Co(NO)_2$ 86
Co_3O_4 86
CoS 77
Co/TiO 86
Cu/Al_2O_3 80
CuAu 222
$Cu-Ni/Al_2O_3$ 80
Cu/ZnO 77-79
$Cu/ZnO/Al_2O_3$ 77

Fe 222
αFe 214
Fe/Al_2O_3 80
Fe/NH_3 79
$Fe(NO)_2$ 86
FeS 191
$Fe_{1-x}S$ 143

$Ga_{1-x}Al_xAs$ 43
$(Ga_9Al)As$ 42
GaAlAs 47-49
GaAs 38, 40, 43, 47-49, 55-58, 60, 129
GaInAs 46
GaP 129, 223
GaSb 44, 48
Ge 2, 4, 127, 215, 217-218, 260

H_2 77-78
He 4, 16, 50

InAs 44, 60
InGaAs 43
InP 46
InSb 4
Ir 4
Ir/Al_2O_3 79, 80
$Ir-Cu/Al_2O_3$ 80
$Ir-Rh/SiO_2$ 80
$Ir-Ru/SiO_2$ 80
Ir/SiO_2 79, 80

KBr 248, 259
KCl 246-247, 249

Li 258
LiF 253, 259

MgO 78
Mo 57-58, 107

N 130, 257, 259
Nb 57-58, 259

$NbC_{0.72}$ 259
Nb_2O_5 84
NbS 158
Ne 130
Ni 74-75, 77, 214
Ni/Al_2O_3 77, 80
$NiAl_2O_4$ 75-77, 82
Ni-Al 210
NiAs 143, 191-194
$Ni-Cu/Al_2O_3$ 81-82
Ni-25%Fe 210
$Ni-Mo/\gamma Al_2O_3$ 83
NiP 191
Ni/Si_2O_3 80

O 256-257
O_5/Al_2O_3 80
O_5-Cu/SiO_2 80
O_5/SiO_2 79, 80

Pd/Al_2O_3 80
PdO 86
$Pd-Ce/Al_2O_3$ 80
$Pd-Fe/SiO_2$ 80
Pr 130
Pt 74
Pt/Al_2O_3 79, 80
$Pt-Cu/SiO_2$ 80
$Pt-Ir/Al_2O_3$ 80
$Pt-Re/Al_2O_3$ 80
$Pt-Rh/Al_2O_3$ 80
Pt/SiO_2 74, 79-80
$Pt-Sn/Al_2O_3$ 80
$Pt-Sn/SiO_2$ 80

Rb 107
$Re-Cu/SiO_2$ 80
Rh 132-133, 222
Rh/Al_2O_3 79-81
$Rh-Co/Al_2O_3$ 80
$Rh-Fe/SiO_2$ 80
RhMgO 80
Rh/SiO_2 80
Rh/TiO_2 84
Ru/Al_2O_3 79, 80
$Ru-Cu/SiO_2$ 80
Ru/SiO_2 80

S 14, 15
Sa 130
Si 2, 4, 35-36, 223, 227-228, 244-246, 251-258
SiO_2 35-36, 78-79, 86
$SiO_2-Al_2O_3$ 79
Sr_2SiO_4 146-151, 165
$SrTiO_3$ 60, 61

TaS_2 174-175, 181-186, 188-189
$TaSe_2$ 184
$Ta_{1-x}V_xS_2$ 159, 185-187
$ThBr_4$ 179
TiO_2 84-85
TSeF-TCNO 156

VSe_2 176, 184

W 58

Xn 5

YbH_2 127-131
Yb_3S_4 151-152
$Yb_{3-\delta}S_4$ 151-154
Yt 4, 128
$YBa_2Cu_3O_{7-y}$ 61

ZnS 129

Aluminas of Ba and Pb 260
Actinide chalcogenides 130
Actinide pnictides 130
Bacteriorhodopsin 3, 15-16
α- and β-chain hemoglobin 6
Biphenyl 179
Bovine serum albumin 17
Crystobalite 143
Lysozyme 17
$NCCH_2Co(COOMe)(CO_3)^{-1}Na^+$ 86
Thiourea 141
Urea, $(H_2N-CO-NH_2)$ 117

SUBJECT INDEX

Amplitudons 179
Analog-to-Digital Converter (ADC) 107
Anomalous Transmission (AT)
  Divergent Beam X-ray Technique 215-218
Atomic Modulated Functions (AMF) 160-162

Back Reflection Divergent Beam (BDB) X-ray
    Technique 207-214
Bacteriorhodopsin Crystals 3, 15-16
Bessel Functions 1, 13-14
Biaxial Strain Model 27-31
Biological Molecules 6, 14-17
Borrmann (AT) Effect 215-217
Bremsstrahlung X-radiation 96-97, 103-105
Bulk Modulus 119

Catalytic Materials 67-86
  see EXAFS 67-77
  methanol synthesis catalyst 77-78
  metal clusters 78-82
  bimetallic supported metal
      catalysts 80
  hydrode sulphurization catalysts
      (HDS) 82-83
  strong metal support interaction
      (SMSI) catalysts 84
  zeolites 84-85
  oxide catalyst systems 86
  other materials 86
Characterization of Materials Under
    High Pressure 93, 118-134
  phase diagram 118-119
  bulk modulus 119, 127, 130-132
  equation of state 119
  pressure induced phase transitions 120
  phase transformations 126-130
  measurements at high pressure 132-133
Charge Density Wave/Periodic Lattice
    Distortion CDW/PLD 176, 178, 183-184, 188
  at (SRO) 184
  at (LRO) 188
  metal dichalcogenides 183

CVD 35
Collimators 1-4, 15
Compositional Disorder 157-158
Compositional Modulation 141, 151-154, 157
Convergent Beam Electron Diffraction (CBED) 193
Czochralski Growth Crystals 251, 253-257

Debye Temperature 244, 246
Debye-Waller Factor 155, 182
Diamond Anvil High Pressure Cell (DAC)
    95, 111-120, 123-126
  studies with 126-133
Diffuse X-ray Scattering (DXS) 228-238
  theory 228-229
  point defects 229-232
  aggregates point defects 232-236
  elastic thermal wave 236-238
  experimental techniques 238-243
  triple crystal diffractometry (TCD) 238-243
  experimental results 243-250
  clusters in as grown Si 251-253
  by heat treatment 253-257
  process induced effects 257-258
  defects in other than Si 258-259
Divergent Beam (DB) X-ray Technique 205-224
  back reflection (BDB) 207-209, 211-212, 221-223
  multi-exposure method 208
  analysis incomplete patterns 209-214
  transmission (TDB) 214-218
  orientation, lattice parameters 214-215
  anomalous transmission (AT) DB 215-218
  line profile analysis 218-221
  selected area topography 218-221
  applications 221-223
Double Crystal (X-ray) Diffractometry
    (DCD) 22, 33, 37
Dynamic Nuclear Polarization (DNP) 16

European Synchrotron Radiation Facility
    (ESRF) 102, 106
Extended X-ray Absorption Fine Structure
    (EXAFS) 67-86

theory 68-69
experiment 69-70
EXAFS spectrometer 69-70
data analysis 70-73
multiphase systems 74-77

First Order Laue Zone (FOLZ) 192-193
Fourier Transform Catalytic Materials 69-86
Frank Loops 257
Full Width at Half Maximum Intensity (FWHM) 54, 59
FZ Grown Crystals 253-254
Grazing Incidence X-ray Diffraction (GID) 22, 51-62

High Pressure
see characterization of materials at high pressure 93-134
High Pressure Cells
(DAC) 95, 111-120
non-diamond cell 95, 120-122
Higher Order Laue Zone (HOLZ) 173-174, 188, 193
Higher Symmetry Parent Phase 141
Hydro Desulphurization Catalysts 82-83

Incommensurate
modulated structures 158-163, 182
satellite reflections 185
Ion Implantation 257
Irradiation By Electrons 259
Irradiation By γ-rays 259
Irradiation By Neutrons 257, 260
Irradiation By X-ray 259

Jacobi-Ayer Generating Relation 170, 179
Johanson-Type Bent Crystal 69

Knee Points 252, 255
Kossel Pattern 205
pseudo 222-223
Kramers-Kronig Relation 9

Lang Camera Technique 36
Lattice Dynamics 145
Long Range Order (LRO) 68, 141, 158, 188

Macromolecular Systems 6, 14-17
Magnetic Susceptibility 151
Membranes, polar head group 14-15
Microdefects 251
Microtubuli Assembly 6
Modulated Structures 139-194
static dispersive modulations 141
higher symmetry parent phase 141
diffraction techniques 144-146
(LRO) 146-158
displacively modulated 146-151
compositional 141, 151-154
(SRO) 154
displacive disorder 154-157
compositional disorder 157-158
incommensurately modulated symmetry of LRO 158
AMF, symmetry operations and super space groups 159-162
relation to representation theory 163-164
satellite extinction 164
super space symmetry 164-169
structure factor formalism 169-183
static LRO 169-176
mixed compositional and displacive 176
applications selected materials 183-194
Monochromators 1-3
Bonse Hart 33
Bartels 33
grooved crystal 33, 44, 252
four crystal 34, 44
graphite 54-55
Ge crystal 55
Monochromator Scan Method (MSM) 93-95, 117-118
Monophasic Systems 70-72
Mossbauer Emission Spectroscopy 83
Multi Anvil Type X-ray System (MAX 80) 121-122
Multi Channel Analyser (MCA) 107-108
Multi Layer Structures
microstructure characterization 21-22, 35-48
in homogeneous strains 41-48
Multiphasic Systems 72-77
EXAFS data analysis 74-77
Multiwire Proportional Counters (MWPC) 5

Neutron Diffraction 117
Neutron Scattering 1, 6, 8, 10-17
spin dependent 6, 10-14
orientated macromolecules 11-12
free molecules 12-14
contrast variation 14-17
macromolecular crystals 14
Nickel Arsenide
modulated structures 191-194
Non Diamond High Pressure Cell 95, 120-122
belt tyre 120
piston cylinder device 120-121
cubic anvil 121
MAX 80 121-122
Nuclear Magnetic Resonance (NMR) 16

Pendellosung Fringes 38
Phasons 179-182, 191
Point Defect Aggregates in Single Crystals 227-260
DXS techniques 238-243
experimental results 243-250
as grown Si crystals 251-253
heat treatment 253-257
process induced effects 257-258
crystals other than Si 258-259
Polymers, phase transition 6
Proteins 14-16
Protein Sensitive Detector (PSD) 95

Reciprocal Lattice Points 'relps' 244-245, 258
Residual Stress 23
Resonant Solution Scattering Data 12
Resonant X-ray Scattering 3, 6
Rocking Curve Modelling 23, 33, 38-49
Rotating Anode 69, 259

Satellite Extinction Conditions 164-166, 172
Seemann-Bohlin Focussing Diffractometer 51
Selected Area Electron Diffraction Patterns (SADP) 142-143, 147-148, 152, 164-165, 174, 185, 187, 190
Sherrer Equation 54
Short Range Order (SRO) 68, 154, 184
Silicon Crystals 227-228, 244-246, 251-258
Small Angle X-ray Scattering
  Theory, Single Atom 7-9
  macromolecules 11-12
  free molecules 12-14
  instruments 2-6, 15, 17
  double focussing camera 2-4
  collimators and monochromators 1-4, 15
  sample 4, 6
  thermostated cell 6
  detectors 5
  measurements 1, 2, 5-6
  anomalous scattering 1, 6, 14-16
  solution scattering 6
  macromolecular systems 6, 14
Soft Mode Displacive Phase Transitions 45
Static Displacive Modulations 141, 147-151
Stokes-Wilson 'asymtotic' Scattering 257-259
Strain Gradients 22, 43, 45-46
  modulations 22
  profiles 44-49, 50
Stress-Strain Tensor 206, 208, 210, 212-214
  using BDB 221-222
Strong Metal Support Interaction (SMSI) Catalysts 84
Super Lattices 48-49
Super Space Groups 159-166
Swirls 251-253, 258
Synchrotron Radiation (SR) 1-6, 15, 44, 51, 55, 69, 95-102, 105-106, 127, 129, 259-260
  storage ring 97-103
  brilliance 99, 102
  insertion devices 100-102
